No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

## ALIGNMENTS

Modulating oxidative stress level in a cell, involves contacting the cell with an oxidative stress regulator selected from colostrinin, its constituent peptide, analog or their combinations. The present invention relates to a method for modulating the oxidative stress level in a cell or a patient, comprising contacting the cell with, or administering to the patient, an oxidative stress regulator selected from colostrinin, or its constituent peptide (e.g. the present peptide), to change the level of an oxidising species in the cell. The method can be used to treat oxidative damage to skin, by decreasing or preventing an increase in the level of damage to a biomolecule of the patient Length 11; Dermatological; oxidative stress regulator; colostrinin. Sequences AAB72246 - AAB72275 represent peptides derived from clostrinin, a proline rich polypeptide aggregate contained in colostrum. The peptides have immune response modulatory activity, and are capable of inducting cytokines. Colostrinin and its derived peptides are useful for inducing cytokine production, for modulating an immunological response and for inducing blood cell proliferation. The peptides are useful in the treatment of disorders of the central nervous system, neurological disorders, mental disorders, dementia, neurodegenerative diseases, Alzheimer's disease, motor neurone disease, psychosis, neurosis, chronic disorders of the immune system, bacterial and viral infections and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Neuroprotective; neural cell differentiation regulator; colostrinin;

Colostrinin is the proline-rich polypeptide fragment of colostrum. These peptides can be used in the treatment of central nervous system disorders such as senile dementia, Parkinson's disease, Alzheimer's disease, psychosis and neurosis, immune system development of a child's immune system, as a dietary supplement, and to promote the dissolution of beta-amyloid plaques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The present sequence is that of a colostrinin constituent peptide that is preferred for use as an immunological regulator and as a blood cell regulator in claimed methods of the invention. Methods are claimed for: inducing a cytokine in a cell by contact with an immunological regulator, where the cell is present in a cell by contact with an immunological regulator. Corganism, and the cell is mammalian, including human; modulating an immune response in a cell by contact with the immunological regulator under conditions effective to induce a cytokine; modulating an immune response in a patient by administering an immunological regulator under conditions effective to induce a cytokine, where the immune response is specific or non specific, an interferon regulator is administered topically or as part of a dietary supplement, and where the immune response is specific or non specific, an interferon response or an antibody response; modulating blood cells with a blood cell regulator, where the blood cells are increased in number or differentiated; and a method for modulating blood cell proliferation in a patent. A claimed method for modulating blood cell proliferation in a patent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Modulation of blood cell proliferation in a patient involves use of blood cell regulator selected from colostrinin, its constituent peptide and/or
invention is useful for promoting the differentiation of cells and for treating damaged neural cells in a patient. The present amino acid sequence represents a specifically claimed colostrinin peptide used in the method of the invention
                                                                                                                                                               5; Length 11;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention comprises a method for promoting cell differentiation (e.g. neural cell differentiation). The method involves contacting cells with a neural cell regulator (i.e. a colostrinin peptide) in order to change the cells in morphology to form enural cells. Colostrinin is a proline-rich polypeptide aggregate that is present in colostrum. The method of the
                                                                                                                                       Use of colostrinin, its constituent peptide or analog as a neural cell regulator, for promoting neural cell differentiation and treating damaged neural cells in a patient.
                                                                                                                                                                                                                                                                          The present invention relates to a method for promoting neural cell afferentiation and treating damaged neural cells, using colostrinin and colostrinin peptides (e.g. the present peptide) as a neural cell regulator. Colostrinin is a polypeptide complex found in colostrum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cell differentiation; neural cell regulator; colostrinin peptide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Promoting cell differentiation in a patient involves use of blood cell regulator selected from colostrinin, its constituent peptide and/or

The invention relates to a composition which comprises a blood cell regulator selected from colostrinin, its constituent peptide and/or analogue. The invention is used for modulating the oxidative stress level in a cell e.g. mammalian or human cell present in a cell culture, tissue, organ, or organism, or for treating oxidative damage to the skin of a patient e.g. animal or human; to modulate oxidative stress during/ after a premature birth or normal birth, preventing/delaying aging in a patient, enhancing wound healing, and the reduction of side effects of cosmetic procedures. The method changes the level of an oxidising species in the cell, such as decreases or prevents increase in the level of in the cell, such as decreases or prevents increase in the level of in the cell, such as decreases or prevents increase in the level of clause to the same conditions when the oxidative stress results in regulator is not present. The modulation of oxidative stress results in enhanced repair, regeneration, and replacement of cells, tissues and organs (e.g. kidney, liver, pancreas, skiin, and the other internal and external organs), as well as enhanced preservation of such organs for
                                                                                                                                                                                         ö

The present invention describes the use of a modulator selected from colostrinin, its constituent peptide, its active analogue, and a colostrinin, its constituent peptide, its active analogue, and a colostrinin, its constituent peptide, its active analogue, and a colostrinin and required lipid peroxidation in a cell, in a cell, down regulating 4HNE-mediated lipid peroxidation in a cell, inhibiting apoptosis in a cell, protecting against DNA damage in a cell.

The modulator has cytostatic activity, and can be used as a 4HNE coloring thms. The modulator is useful in the manufacture of a medicament for reducing 4HNE-protein adduct formation, inhibiting 4HNE-mediated colorining 4HNE-induced activation of p53 protein, colostrinin, or its constituent peptide or active analogue is useful for inhibiting apoptosis in a cell, protecting against DNA damage in a cell, or reducing the toxic effect of beta-amyloid or retinoic acid on a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Use of colostrinin for e.g. modulating an intracellular signaling molecule in a cell, down regulating 4HNE-mediated lipid peroxidation in a cell, inhibiting apoptosis in a cell, or protecting against DNA damage in a cell.
                                                                                                                                                                                                                      modulator; colostrinin; intracellular signaling molecule modulator; 4HNE-mediated lipid peroxidation down regulation; apoptosis inhibition; DNA damage; beta-amyloid; retinoic acid; cytostatic; 4HNE inhibitor; 4HNE-protein adduct firmation reduction; 4HNE-mediated glutathione deplation inhibition; p53 inhibition; c-Jun NH2-terminal Kinase inhibition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Kruzel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Georgiades JA, Hughes TK,
                                                                                                                                                                                             Constituent peptide of colostrinin SEQ ID NO:6.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 6; SEQ ID NO 6; 46pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is that of a peptide that can be recovered from covine colostrinin using the method of the invention. The invention of provides a method for the recovery of peptides (especially colostrinin) from colostrum in substantially pure, biologically active form and in high yield. The method involves mixing the colostrum with an alcohol to form an alcohol phase containing the colostrinin and a precipitate containing higher molecular weight caseins and other proteins. Best results are obtained using methanol or ethanol of at least 80%, and preferably up to 100%, purity. The alcohol phase is then separated from the precipitate, and the colostrinin is separated from the alcohol, preferably by evaporation, to form a colostrinin-rich phase, which is recovered. A precipitation agent, such as ammonium sulfate, may be added to induce precipitation of the colostrinin peptides. The method is generally applicable to the separation of peptides from fluids containing and a molecular weight proteins, lipids, carbohydrates and/or nucleic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides the sequences of a number of peptides found in ewe's colostrinin. Colostrinin is the proline-rich polypeptid fragment of colostrum. These peptides can be used in the treatment of central nervous system disorders such as senile dementia, Parkinson's disease, Alzheimer's disease, psychosis and neurosis, immune system disorders such as bacterial and viral infections, to improve the development of a child's immune system, as a dietary supplement, and promote the dissolution of beta-amyloid plaques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                100.0%; Score 62; DB 4; Length 12; 100.0%; Pred. The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide agraces in the specification, or their complements or fragments, and sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any. of the 6888 amino acids equences concolding at least 8 amino acids of any. of the 6888 amino acids equences of the properties of any of the 6888 amino acids mino acids of stringency conditions to a nucleic acid molecule expression (comprising a plurality of single exon nucleic acid plurality of probes for measuring human gene expression, a method of a datessably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a method of configuous amino acids of any of the above-mentioned amino acids of solling and/or licensing single exon probes or microarrays to a customer desiring to measure gene expression, a method of providing human gene expression date by subscription, and a computer-readable corporated above. The probe, methods and apparatus are useful in gene expression analysis. The probes may be used as tools for surveying the above. The probe, methods and apparatus are useful in gene capression analysis. The probes are used in identifying and characterising gross and lerrative splicing events, in priming the synthesis of nucleic acids, or in expressing the Orbe protein of the inventor in priming the synthesis of nucleic acids, or in expressing the Orbe protein of the propes of this patent did not format directly from USPTO at this patent did not format directly from USPTO a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel human polynucleotide and the encoded polypeptide. A polynucleotide of the invention ApM65202-ApM66731 is useful therapy. An oligonucleotide of the invention ApM66202-ApM66731 is useful detecting the polynucleotide. The polynucleotide or as a probe for useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy. The proteins ADM03759-ADM06201 encoded by the polynucleotides are useful as pharmaceutical agents. The present sequence represents a protein sequence of the invention.

reaction (PCR) primers, oligomers, and for chromosome and gene (11) reaction (PCR) primers, oligomers, and for chromosome and gene (11) reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this
                                                                                                                                                                           invention relates to isolated polynucleotide (I) and polypeptide (II)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; diagnostic; drug screening; forensics; gene mapping; biodiversity assessment; Parkinson's disease; Alzheimer's disease; neurodegenerative diseases; anaemia; platelet disorder; wound; burns; ulcers; osteoporosis; autoimmune disease; cancer; molecular weight marker; food supplement; antiparkinsonian; nootropic; antionaemic, anticoagulant; thrombolytic; vulnerary; antillex; osteopathic; immunosuppressive; antiinflammatory; cytostatic; gene therapy; chromosome 6q22.1-22.33.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              pregnancy relative disease, various tumours, immunological diseases and some inflammations. The invention also discloses the antagonist resisting the polypeptide and its treatment effect, and the application of the polymucleotide. The present sequence represents the growth hormone 74.03
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to the novel polypeptide, growth hormone 74.03, and the polynucleotide encoding it. The polypeptide is useful in treating various diseases, such as cardiovascular diseases, development disorder,

WPI; 2003-371981/35. N-PSDB; ADC30708 New polynucleotide and polypeptide useful for diagnosing, preventing or treating conditions such as neurodegenerative diseases, anemias, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or cancer.

Claim 20; SEQ ID NO 1761; 1185pp; English

The invention relates to 971 movel human cDNA sequences (ADC29919-CC ADC3089) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with the vectors and host cells comprising a mucleic acid of the invention; he recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; an antibody companies a polypeptide of the invention; and methods of invention further discloses methods for the invention; and methods of compound which binds to a polypeptide of the invention. The identifying a compound which binds to a polypeptide of the invention. The complicating a medical condition; kits comprising polymucleotide probes and/or monoclonal antibodies for carrying out the methods of the envention or complication; methods for the identification of compounds that modulate the invention are activity of the polymucleotide and/or polypeptide; and 767 conting sequences corresponding to the cDNA sequences of the invention are expression or activity of the polymucleotide and/or polypeptide; and 767 conting sequences corresponding to the cDNA sequences of the invention are useful in diagnostics, drug screening, forensics, gene mapping, in the captual products dependent on DNA and amino acid sequences. They are companied diseases such as Parkinson's disease, Alzheimer's disease and other neurodegenerative diseases, anaemia, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or cancer. The nucleic acids may also be used as phyridisation probes or cancer. The nucleic acids may also be used as phyridisation probes or primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, and an anaement of the present sequence represents a specifically. claimed human polypeptide sequence of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 15493, Application US/09248796A
Patent No. 6747137
GENERAL INFORMATION:
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: WOMBER: US/09/248,796A
TITLE OF INVENTION: WOMBER: US/09/248,796A
TITLE OF INVENTION WOMBER: US/09/248,796A
CURRENT APPLICATION NUMBER: US/09/248,796A
CURRENT FILING DATE: 1999-02-12
PRIOR APPLICATION NUMBER: US/09/4,725
PRIOR FILING DATE: 1999-08-13
PRIOR APPLICATION NUMBER: US/09/6,409
PRIOR FILING DATE: 1999-08-13
NUMBER: OF SEQ ID NOS: 28208
SEQ ID NO 15493
APPLICANT: Curran, Thomas

Applicant: D'Arcangelo, Gabriella
TITLE OF INVENTION: INTERACTION OF REELIN WITH VERY LOW
TITLE OF INVENTION: THERAPIES
TITLE OF INVENTION: THERAPIES
FILE REPERBRENCE: 2427/097704.
CURRENT FILING DATE: 1999-06-16
VURBER OF SEQ ID NOS: 5
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 2
LENGTH: 3461
TYPE: PRT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 35881, Application US/09270767

GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
FILE REFERENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT PILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 35851

LENGTH: 411
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

I. CATALYTIC ACTIVITY: ATP + L-aspartate + LRNA(Asp) = AMP + diphosphate + L-aspartate + LRNA(Asp).
I. SUBUNIT: Homodimer (By similarity).
I. SUBCELLULAR LOCATION: Cytoplasmic.
I. SUBCELLULAR LOCATION: Cytoplasmic.
I. SIMILARITY: Belongs to the class-II aminoacyl-tRNA synthetase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pfam; PF02938; GAD; 1.
